-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 8/27/03.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-54 is/are pending in the application.
- 4a) Of the above claim(s) 8-15 and 18-54 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-7, 16 and 17 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 10.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

Art Unit: 2811

DETAILED ACTION

Pending and Active Claims

1. In view of the previous Office action, claims 1-54 are pending in this application; and claims 1-7, 16 and 17 remain active in this Office action.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 3, 4, 6, 7 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yano et al. ("Yano"; US 6,045,626; of record) in view of Jia et al. ("Jia"; US 6,312,819) and/or Guenzer (US 5,556,463; of record).

Yano discloses a semiconductor structure (Fig. 1; also see col. 7, lines 34-39), comprising: a monocrystalline substrate (2; Si); a binary metal oxide material layer (21; an YSZ buffer layer); and a monocrystalline material layer (22; GaN, an epitaxial compound semiconductor layer).

Although Yano does not expressly disclose that the structure can further include an amorphous intermediate layer, one of ordinary skill in the art would readily recognize that an amorphous silicon oxide intermediate layer can be desirably formed between a substrate and a buffer layer for improving the quality of a top epitaxial layer, as

Art Unit: 2811

evidenced in Jia (see the silicon oxide amorphous intermediate layer in Fig. 4) and/or in Guenzer (see the silicon oxide amorphous intermediate layer 20 in Fig. 2; also see col. 4, lines 1-15 for epitaxial growth of a compound layer).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the amorphous silicon oxide intermediate layer of Jia and/or Guenzer into the semiconductor structure of Yano, so that a semiconductor structure having improved quality in the top epitaxial layer would be obtained.

Regarding claim 3, it is noted that a top portion of the YSZ buffer layer in Yano can be inherently capable of functioning as a template layer for the epitaxial growth of the top GaN layer.

4. Claims 2 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yano et al. ("Yano"; US 6,045,626) in view of Jia et al. ("Jia"; US 6,312,819) and/or Guenzer (US 5,556,463) as applied in claims 1, 3, 4, 6, 7 and 16 above, and further in view of Tadatomo et al. ("Tadatomo"; US 5,770,887).

The disclosures of Yano, Jia and Guenzer are discussed as applied to claims 1, 3, 4, 6, 7 and 16 above.

Yano, Jia and Guenzer do not expressly disclose that the binary metal oxide material buffer layer can be formed of a binary metal oxide material which has a rock-salt crystalline structure. However, one of ordinary skill in the art would readily recognize that a binary metal oxide material such as MgO or BaO can also be used as a

Art Unit: 2811

buffer layer for achieving good epitaxial quality of a GaN layer, as evidenced in Tadatomo (see col. 5, lines 24-35). And, it is noted that MgO and BaO both inherently have a rock-salt crystalline structure.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the MgO or BaO buffer layer of Tadatomo into the above semiconductor structure taught by Yano in view of Jia and/or Guenzer, so that a semiconductor structure having good quality in the top epitaxial GaN layer would be obtained. And, in such a semiconductor structure the binary metal oxide material layer would inherently have a rock-salt crystalline structure.

5. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yano et al. ("Yano"; US 6,045,626) in view of Jia et al. ("Jia"; US 6,312,819) and/or Guenzer (US 5,556,463) as applied in claims 1, 3, 4, 6, 7 and 16 above, and further in view of Sugao (JP 3-171617; 07/1999).

The disclosures of Yano, Jia and Guenzer are discussed as applied to claims 1, 3, 4, 6, 7 and 16 above.

Yano, Jia and Guenzer do not expressly disclose that the Si substrate can have a (001) surface and having an orientation from about 2 to about 6 degrees offset toward to the (110) direction. However, one of ordinary skill in the art would readily recognize that a Si substrate with such surface orientation is desirable for achieving good quality in a top epitaxial layer, as evidenced in Sugao (see its English abstract).

Art Unit: 2811

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the substrate surface orientation of Sugao into the above semiconductor structure taught by Yano in view of Jia and/or Guenzer, so that a semiconductor structure with good quality in the top epitaxial layer would be obtained.

Double Patenting

6. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. **The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.**

7. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Art Unit: 2811

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b)

37 CFR 1.78(b) provides that when two or more applications filed by the same applicant contain conflicting claims, elimination of such claims from all but one application may be required in the absence of good and sufficient reason for their retention during pendency in more than one application.

8. Double-patenting conflicts exist between claims of the following related issued patents and co-pending applications **which includes the present application.**

Art Unit: 2811

Serial Numbers of Related Issued Patents and Co-pending Applications (shown above)

9. While it is true that the Examiner has the burden to show how a rejection is specifically applied to each claim, the exemplary showing with respect to the claims individually discussed below establishes a *prima facie* showing of the unpatentability of the instant claims and is sufficient to give the applicant fair notice of how the rejection is applied to each and every other claim. Further, an analysis of all of the claims in the approximately 330 related applications would be an extreme burden on the Office requiring millions of claim comparisons. Accordingly, the Office is shifting the burden to the applicants to show, if they can, patentable distinctions between the instant claims and those of the other applications and patents. Specifically, in order to resolve the conflict between applications, applicant is required to:

- (1) file terminal disclaimers in each of the related applications terminally disclaiming each of the other approximately 330 applications;
- (2) provide a statement attesting to the fact that all claims in the approximately 330 applications have been reviewed by applicant and that no conflicting claims exists between the applications. Applicant should provide all relevant factual information including the specific steps taken to insure that no conflicting claims exist between the applications; or;
- (3) resolve all conflicts between the claims in the above identified approximately 330 applications by identifying how all the claims in the instant application are distinct and separate inventions from all of the claims in all of the other approximately

Art Unit: 2811

330 identified applications. Note: the examples provided below are merely illustrative of the overall problem. Only addressing/correcting the specifically identified conflicts would **not** satisfy the requirement.

Further, due to Applicant's better familiarity with the related applications, Applicant now has the burden of confirming that the preceding list is accurate and complete, or must take appropriate action(s) to assure that no such conflicts exist in any other applications that have been inadvertently omitted from the preceding list, but do in fact possess related subject matter.

Applicant is reminded that obviousness-type double patenting analysis entails a two-step process: (1) the claims of this application and the other approximately 330 applications must be construed; and (2) the claims of this application must be compared with the claims of the other applications to determine whether the differences in subject matter between the two claims render the claims patentably distinct. See Georgia-Pacific Corp. v. United States Gypsum Co., 195 F.3d 1322, 1326, 52 USPQ2d 1590, 1593 (Fed. Cir. 1999), and General Foods Corp. v. Studiengesellschaft Kohle, 972 F.2d 1272, 1279, 23 USPQ2d 1839, 1844 (Fed. Cir. 1992). As the Court of Customs and Patent Appeals (CCPA) explained: "[t]he fundamental reason for the rule [against "double patenting"] is *to prevent unjustified timewise extension of the right to exclude* granted by a patent no matter how the extension is brought about." In re Van Ornum, 686 F.2d 937, 943-44, 214 USPQ 761, 766 (CCPA 1982) (brackets and emphasis in the original) (quoting In re Schneller, 397 F.2d 350, 354, 158 USPQ 210, 214 (CCPA 1968)).

Failure to comply with the above requirement will result in abandonment of the application. However, the requirement will be held in abeyance until allowable subject matter has been indicated by the examiner.

10. The following claim comparisons are examples of conflicts between three of the copending applications:

S.N. 09/908,892; claims 11

A process for fabricating a semiconductor structure comprising:

- providing a monocrystalline silicon substrate;
- depositing a monocrystalline perovskite oxide film overlying the monocrystalline silicon substrate, the film having a thickness less than a thickness of the material that would result in strain-induced defects;
- forming an amorphous oxide interface layer containing at least silicon and oxygen at an interface between the monocrystalline perovskite oxide film and the monocrystalline silicon substrate;
- epitaxially forming a layer of intermetallic compound overlaying the monocrystalline perovskite oxide film; and
- epitaxially forming a monocrystalline compound semiconductor layer overlying the layer of intermetallic compound.

S.N. 09/755,340; claims 17, 19 and 20:

[Claim 17] A process for fabricating a semiconductor structure comprising the steps of:

- providing a monocrystalline substrate;
- epitaxially growing [an] accommodating buffer layer overlying the monocrystalline substrate;
- forming an amorphous layer on the monocrystalline substrate during the growth of the accommodating buffer layer; and
- forming a monocrystalline conductive layer over the accommodating buffer layer;

[Claim 19] epitaxially growing an additional monocrystalline layer above the monocrystalline conductive layer;

[Claim 20] wherein the step of [claim 19] includes growing a semiconductor material layer.

S.N. 09/986,024; claim 169:

A process for fabricating a semiconductor structure comprising:

- providing a monocrystalline silicon substrate;

Art Unit: 2811

depositing a monocrystalline perovskite oxide film overlying the monocrystalline silicon substrate, the film having a thickness less than a thickness of the material that would result in strain-induced defects;

forming an amorphous oxide interface layer containing at least silicon and oxygen at an interface between the monocrystalline perovskite oxide film and the monocrystalline silicon substrate; and

epitaxially forming a monocrystalline compound semiconductor layer overlying the monocrystalline perovskite oxide film.

A comparison of the claims shows that all three applications set forth the method steps of providing a monocrystalline substrate; an accommodating buffer (or perovskite) layer; an amorphous oxide interface therebetween; and at least a monocrystalline semiconductor layer over the buffer/perovskite. The respective sets of claims are not identical because:

Claims 17, 19 and 20 of the '340 application are broader than claim 11 of the '892 application because the '340 claims do not further require that the monocrystalline substrate be Si; that the amorphous oxide interface layer also contain silicon; that the accommodating buffer specifically be a monocrystalline perovskite; that the conductive layer specifically be an intermetallic compound; nor that the monocrystalline semiconductor layer be a compound monocrystalline semiconductor layer.

Claim 169 of the '024 application is broader than claim 11 of the '892 application because the '024 claim does not require the additional presence of the epitaxially grown intermetallic compound layer.

Accordingly, claims 17, 19 and 20 of the '340 application are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 11 of the copending '892 application. Although the conflicting claims are not

Art Unit: 2811

identical, they are not patentably distinct from each other because claim 11 of the '892 application anticipates claims 17, 19 and 20 of the '340 application as explained above. See e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985) for the proposition that an obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but an examined application claim is not patentably distinct from the reference claim(s) because the examined claim is either anticipated by, or would have been obvious over, the reference claim(s). This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Similarly, claim 169 of the '024 application is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 11 of the copending '892 application. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 11 of the '892 application anticipates claim 169 of the '024 application as explained above. This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

11. While not specifically addressed herein, similar double-patenting conflicts also exist between the product claims of various applications as well. Moreover, while the Office has a long established policy of generally requiring restrictions between semiconductor product claims (class 257) and method claims (class 438) in a given application, this policy does not negate Applicant's responsibility for ensuring that no

Art Unit: 2811

conflicts exist between those applications presenting product claims and those applications presenting method claims. This is because it is also well established agency policy that restricted product and method claims may be subject to rejoinder during the course of prosecution. See MPEP 821.04.

Response to Arguments

12. Applicant's arguments filed on August 27, 2003, have been fully considered but they are not persuasive, as explained below.

Applicant's main arguments include: (A) each of the Yano, Jia and Guenzer fails to teach the claimed invention; and (B) there no suggestion to combine the references.

In respond to these arguments, it is noted that one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986); and that the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Yano discloses the invention as defined in claims 1, 3, 4, 6, 7 and 16, except the subject matter of the claimed amorphous intermediate layer. And, Jia and Guenzer are cited by the examiner to show that one of ordinary skill in the art would

Art Unit: 2811

readily recognize that a silicon oxide amorphous intermediate layer can be desirably formed between a substrate and a buffer layer for improving the quality of a top epitaxial layer. Accordingly, It would have been obvious to the ordinary skill in the art to incorporate such silicon oxide amorphous intermediate layer into Yano's semiconductor structure in order to improve the quality of the top epitaxial layer.

Conclusion

13. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shouxiang Hu whose telephone number is (703) 306-5729. The examiner can normally be reached on Monday through Thursday, 7:30 AM to 6:00 PM.

Art Unit: 2811

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie C. Lee can be reached on (703) 308-1690. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
